

## Measuring magnifier MM

### The measuring magnifier MM

The achromatic lens system provides first-class image sharpness throughout the entire field of vision. The data can be read on both light and dark backgrounds thanks to the special reticle.

Of course you can focus the magnifier steplessly. Due to the inclined position an excellent light entry into the light window is possible. The measuring magnifier is delivered with a reticle with m-scale and comes in a break-proof case.

#### Product Specifications :

Measuring range:	15 mm
Measuring accuracy:	0.05 mm
Magnification:	8x, focusable
Lens system:	Achromat, distortion-free
scale graduation:	0.1 mm
Dimension:	40 x 40 x 50 mm
Housing:	metal alloy
Reticle: vacuum, thus	Made of glass with chrome scales evaporated in high high chemical and mechanical resistance.
Weight:	80 g
